

SRX 210 Services Gateway Description

The SRX 210 services gateway can be used by the following types of networks, provided they are connected directly to a traditional private network such as leased lines, Frame Relay, or Multi Protocol Label Switching (MPLS) networks:

- Branch offices
- Small enterprises
- Fixed telecommuters
- Small standalone business deployments

The device can also be used for branch offices where the public Internet is used as an alternative to a traditional private wide area network (WAN).
