

SRX 210 Services Gateway License Key Components

A license key consists of two parts:

- License ID- Alphanumeric string that uniquely identifies the license key. When a license is generated, it is given a license ID.
- License data- Block of binary data that defines and stores all license key objects.

For example, in the following typical license key, the string li29183743 is the license ID, and the trailing block of data is the license data:

li29183743 4ky27y acasck 82fsj6 jzsn4q ix8i8d adj7kr 8uq38t ix8i8d jzsn4q ix8i8d 4ky27y acasck 82fsj6 ii8i7e adj7kr 8uq38t ks2923 a9382e

NOTE: The license data defines the device ID for which the license is valid and the version of the license.
