

Power Sources for Redundant Power Supplies

EX 4200 switches have a redundant power supply. When you have redundant power supplies in a switch, you must connect each power supply to a different input power source. Failure to do so makes the switch susceptible to total power failure if one of the power supplies fails.

冗余电源

如果 Juniper Networks 设备包含一个可选的冗余电源，请将两个电源连接到不同的输入电源。不这样做的结果是 Juniper Networks 设备一路供电出现问题时导致全部的电源故障。
