For additional information about WebApp Secure, please refer to the *WebApp Secure Administrator Guide* and *WebApp Secure Developer Guide*.

Synopsis

WebApp Secure 5.1.3-32 is a mandatory update for all past releases. You must install it before you can update to WebApp Secure 5.5, which is soon-to-be-released.

5.1.3-32 release fixes the software update process problem (specifically the order of update operations) in the previous releases so that the update to WebApp Secure 5.5 works correctly. 5.1.3-32 is an intermediate release, it does not in itself provide any new WebApp Secure features. However, 5.1.3-32 includes all the changes made in the previous releases 5.1.3-4, 5.1.3-24, 5.1.3-28 and 5.1.3-30. If you would like to learn more about feature updates and bug fixes in those releases please review the respective release notes at <http://www.juniper.net/support/downloads/?p=jwas#docs>

This release is only available as a .tar file update.

Installation and Deployment

The installation procedure for WebApp Secure remains the same. As soon as the update is available, it will be downloaded by the system automatically if the system is connected to the WebApp Secure Support System. If upgrading from version 5.1.0-x or lower to 5.1.3-32 then after the upgrade, **WebApp Secure system requires a reboot** due to a change in the Linux Kernel. However, if upgrading from 5.1.3-4, 5.1.3-24, 5.1.3-28 or 5.1.3-30 the system reboot isn't necessary if it was performed during the upgrade to 5.1.3-4, 5.1.3-24, 5.1.3-28 or 5.1.3-30.

Downloading Updates

- WebApp Secure systems not connected to WebApp Secure Support System: Visit <http://www.juniper.net/support/downloads/?p=jwas#sw> for obtaining the latest release tar file update and follow the offline update process
- WebApp Secure installations using AMI (Amazon Machine Image): Contact your sales engineering representative to gain access to the private AMI image.

Downloading Documentation

- The installed software update contains the new documentation.
- Documentation is also available at https://www.juniper.net/techpubs/en_US/release-independent/webapp/information-products/pathway-pages/webapp/product/index.html

Bug Fixes

- The software update process problem (specifically the order of update operations) in the previous releases is fixed so that the update to WebApp Secure 5.5 (soon-to-be-released) works correctly.

Known Issues and Limitations

- Please note that all the Known issues and Limitations noted for release 5.1.3-4, 5.1.3-24, 5.1.3-28 and 5.1.3-30 also apply to 5.1.3-32 as this release fixes only 1 bug in the update process and does not provide any other enhancements.

Requesting Technical Support

To open a case or to obtain support information, please visit the Juniper Networks Support Site:
