NSM3000 is an appliance version of Network and Security Manager (NSM). NSM3000 simplifies the complexity of network administration by providing a single, integrated management interface that controls device parameters.

This robust hardware management system installs in minutes with full high availability (HA) support, making it easy to scale and deploy. Enterprise customers with limited resources can benefit significantly from NSM3000 because it eliminates the need to have dedicated resources for maintaining a network and security management solution.

NSM3000 makes it easy for administrators to control device configuration, network settings, and security policy settings for multiple families of Juniper devices including:

- IDP Series Intrusion Detection and Prevention Appliances and Firewall and VPN devices running ScreenOS.
- Devices running JUNOS software, such as J Series Services Routers, SRX Series Services Gateways, EX Series Ethernet Switches, M Series Multiservice Edge Routers, and MX Series Ethernet Services routers.
- SA Series SSL VPN Appliances
- IC Series Unified Access Control Appliances

For a complete list of supported device families and platforms, see the Network and Security Manager Administration Guide.

Up to 10 administrators can log into NSM3000 concurrently.

This quick start explains the following steps for installing and configuring NSM3000 and for configuring NSM.
1. Install the NSM3000 appliance hardware.
2. Set up the NSM3000 appliance, using the serial port.
3. Configure the NSM software, using the Web interface.
4. Configure the NSM software, which is preinstalled onto the NSM3000 appliance, with site-specific parameters.

Hardware Installation

We recommend that you install NSM3000 on your LAN to ensure that it can communicate with your applicable resources, such as authentication servers, DNS servers, internal Web servers through HTTP/HTTPS, external Web sites through HTTP/HTTPS (optional), the Juniper update server via HTTP, Network File System (NFS) file servers (optional), and client/server applications (optional).

NOTE: If you decide to install NSM3000 in your DMZ, ensure that it can connect to your internal resources.

NSM3000 Ports

Table 1 on page 4 provides required port information on the NSM3000.

For more information on ports, refer to the Network and Security Manager Installation Guide.

**Installing the NSM3000 Hardware**

Follow these steps to unpack the NSM3000 appliance and connect it to your network.

To install NSM3000:

1. Place the shipping container on a flat surface and remove the hardware components with care.
2. Remove the NSM3000 device from the shipping container and place it on a flat surface.
3. Mount NSM3000 in your server rack using the attached mounting brackets.
4. Plug the power cord into the AC receptacle on the rear panel.

**Figure 1: Rear Panel of NSM3000**
If your NSM3000 contains two power supplies, plug a power cord into each AC receptacle.

5. Plug the other end of the power cord into a wall socket.
   If your NSM3000 contains two power supplies, plug each power cord into a separate power circuit to ensure that the NSM3000 continues to receive power if one of the power circuits fails.

6. Plug the Ethernet cable into the port marked ETH0 on the front panel.

7. Plug the null modem serial cable into the console port.
   This cable was shipped with your NSM3000. If you do not have this cable, use any other null modem serial cable.

8. Push the power button in the upper left corner of the front panel.
   The green LED below the power button turns on. The NSM3000 hard disk LED turns on whenever the appliance reads data from or writes data to an NSM3000 hard disk.

The internal port uses two LEDs to indicate the LAN connection status, which is described in Table 2 on page 6.

Table 2 on page 6 provides LED information for the Ethernet ports.

Table 2: Ethernet Port LEDs

**Initial Setup Configuration**

When you first turn on an unconfigured NSM3000 appliance, you need to enter basic network and machine information through the serial console to make your appliance accessible to the network. After entering these settings, you can continue configuring the appliance using the CLI or the Web interface. You are not prompted for the initial setup information again.

This section describes the required serial console setup and the tasks you need to perform when connecting to your NSM3000 for the first time:

- Boot NSM3000 on page 7
- Set Up Your Appliance on page 7

**Boot NSM3000**

To configure NSM3000 for the first time, you must attach your NSM3000 appliance to a console terminal running an emulation utility such as HyperTerminal.

1. Configure a console terminal or terminal emulation utility to use the following serial connection parameters:
   - 9600 bits per second
   - 8-bit no parity (8N1)
   - 1 stop bit
   - No flow control

2. Connect the terminal or laptop to the null modem serial cable plugged into the NSM3000 console port.

3. Turn on the NSM3000 appliance.

   When NSM3000 is powered on, the serial console displays diagnostic information before proceeding to the boot countdown. When complete, the serial console displays the login prompt terminal emulator.

   `NSMXpress.juniper.net login:`

4. Enter `admin` as your default login name.

5. Enter `abc123` as your default password.

6. Change your default password when prompted. Enter the default password first, followed by your new password. All passwords are case-sensitive.

**Set Up Your Appliance**

This section provides the minimum information necessary to make your appliance active on the network.
To set up your appliance either as a regional server or a central manager, follow these steps:

1. Enter the IP address for interface eth0 and press Enter.
2. Enter the subnet mask for interface eth0 and press Enter.
3. Enter the default route or default gateway address for interface eth0 and press Enter.

ip_tables: (C) 2000–2002 Netfilter core team
Done!

Your NSMXpress is now active on the network.
To configure your system via a web browser, connect to:
https://10.150.43.205/administration

To configure your system via command line, type:
nsm_setup

For operation of NSM server, switch to user “nsm”.
Please consult NSM product documentation for details.

To configure the NSM software using the CLI, see the NSMXpress and NSM3000 User Guide. To configure the NSM software using the Web interface, go to “Web Interface Configuration” on page 8.

**Web Interface Configuration**

To configure NSM on your system from a Web interface, use the following steps.

1. Copy the URL (starting with https://) from the terminal emulator after installing the NSM3000:

   "Your NSMXpress is now active on the network.
   To configure your system via a web browser, connect to:
   https://10.150.43.205/administration"

2. Open a Web browser and paste the URL into the address text box.
3. Press Enter to open the NSM appliance login page.
4. Enter the admin user name and password and then click Login.
5. See “Configuring the NSM Software” on page 9 for details about how to install and configure NSM on your NSM3000 appliance from the Web interface.
Configuring the NSM Software

After you log in as an “admin” user, an initial setup script walks you through additional configuration system settings before finalizing the NSM installation. This chapter describes that setup process.

Your NSM3000 appliance comes preconfigured as a regional server or a central manager. Most installation and configuration steps in this section are identical for both types of server. All exceptions are noted.

After logging into the NSM3000 Web interface, NSM3000 provides you with the following installation options:

- Configuring Basic Settings on page 9
- Configuring High Availability on page 11
- Advanced Options on page 14
- Installing NSM Software on page 17

Configuring Basic Settings

To install the regional server or central manager software using the minimum requirements:

1. Install your NSM3000 hardware as described in “Hardware Installation” on page 4.
2. Boot and setup your NSM3000 appliance as described in “Initial Setup Configuration” on page 7.
3. Enter the https://<ip>/administration URL for your appliance in a Web browser. See “Web Interface Configuration” on page 8 for details.
4. Log into the Web interface as an “admin” user to open the Install NSM Regional Server window (see Figure 3 on page 10) or the Install NSM Central Manager window (see Figure 4 on page 10).

NOTE: The “admin” user default username is admin and the password is the one you created in Step 6 of “Boot NSM3000” on page 7.
Figure 3: Regional Server Configuration Main Menu

Remote Replication of Database
High Availability

Submit
Install
5. Enter the primary IP address of your management server for eth0 (the default).
   
   You can use the default IP address next to the first radio button or select the second radio button and then enter a different IP address. Each IP address you add (in addition to the default IP address) will be available in the drop-down list after you click the second radio button.

6. Enter the NSM superuser password in the top text box, and then reenter it in the text box below it.
   
   This password must be at least eight characters long and is case-sensitive. This password is used by the NSM superuser (also referred to as the NSM administrator). This user has the highest level of privileges in NSM.

7. Enter the GUI Server one-time password in the top text box, and then reenter it in the text box below it. This password is used to authenticate this NSM server with other NSM servers with which it communicates. Regional servers use this password to authenticate peer servers in an HA configuration and to authenticate the central manager. The central manager uses this password to authenticate its peer server in an HA configuration and any regional servers it manages. NSM servers must have the same GUI Server one-time password, or the authentication will fail.

8. Select the license option. (This option is available only for regional servers.)
   a. Select **Base Install** to use the built-in limited device license for as many as 25 devices.
   b. Click **Upload license file** to upload the license file you generated using the Juniper License Management System (LMS), which permits you to manage more than 25 devices. This license file must be located on your local hard drive.
      
      See the *Network and Security Manager installation Guide* for more information about NSM licensing.

9. Click **Submit** to save any changes, and then click **Install** to install the software.

---

**Configuring High Availability**

To configure high availability (HA) settings:
1. On the NSM Configuration Main Menu, click **Menu** next to High Availability to access HA options. See Figure 5 on page 12.

**Figure 5: High Availability Options**

<table>
<thead>
<tr>
<th>Menu: High Availability</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>High Availability</strong></td>
</tr>
<tr>
<td><strong>Primary Status</strong></td>
</tr>
<tr>
<td><strong>HA Remote IP</strong></td>
</tr>
<tr>
<td><strong>HA Link Failure Detection IP</strong></td>
</tr>
<tr>
<td><strong>HA Inter-server password</strong></td>
</tr>
<tr>
<td><strong>Shared Disk</strong></td>
</tr>
<tr>
<td><strong>HA Links</strong></td>
</tr>
<tr>
<td><strong>HA Advanced Settings</strong></td>
</tr>
</tbody>
</table>

2. Use the **High Availability** option to turn HA on (y) or off (n). The default is off.

3. Use the **Primary Status** option to set your NSM3000 appliance as either the primary or secondary server in the HA cluster. If you select y, it is the primary server (the default). If you select n, it is the secondary server.

4. Use the **HA Remote IP** option to enter the IP address for the HA peer in the HA cluster.

5. Use the **HA Link Failure Detection IP** option to enter the IP address of a computer outside the HA cluster that you can ping to verify connection status.

6. Use the **HA Inter-server password** option to enter the heartbeat password used between the primary and secondary servers.

7. Click **Submit** to save the changes.

8. Click **Menu** next to Shared Disk (see Figure 5 on page 12) to configure a shared disk for regional servers (see Figure 6 on page 13) or for central managers (see Figure 7 on page 13.) This step is optional.
NSM3000 supports shared disk via NFS only. Due to the data-intensive nature of NSM, we recommend gigabit speed links (1000 Mbps) for shared disk use. For more information about custom settings, refer to the Network and Security Manager Installation Guide.

9. Click **Menu** next to HA Links (see Figure 5 on page 12) to configure the second link in the HA cluster (see Figure 8 on page 13). This step is optional.

Use the options in this menu to set up a redundant link for the HA cluster. If you are going to use a second link, you need to set the IP address for eth1 before configuring this setting (see “Configuring the Network” on page 24 for details). Setting a redundant link is optional. For more information about custom settings, refer to the Network and Security Manager Installation Guide.
If you configure HA with just one heartbeat link, then device management traffic and data replication traffic both use that link. If you configure two links, device management traffic uses the first link and data replication uses the second.

If you set the HA link count to 2, an expanded menu appears to configure the second link:

**Figure 9: Redundant Links**

| HA Link count | 2 |
| HA Link 2 Local IP |  |
| HA Link 2 Remote IP |  |
| HA Remote Replication IP |  |

10. Click **Menu** next to HA Advanced Settings (see Figure 5 on page 12) to configure HA Advanced settings (see Figure 10 on page 14). This step is optional.

For more information about custom settings, refer to the *Network and Security Manager Installation Guide*.

**Figure 10: HA Advanced Settings**

| HA Heartbeat Frequency | 15 |
| HA Heartbeat Failure Threshold | 4 |
| HA Data Replication Timeout | 1800 |

11. Click **Submit** to save the HA options and return to the NSM Configuration Main Menu.

**Advanced Options**

To display the Advanced Options menu, on the NSM Configuration Main Menu, select **Menu** next to Advanced Options. The Advanced Options menu appears as shown in Figure 11 on page 15.
Advanced installation options include:

- **https port for NBI service**—Allows you to configure a port to listen for messages for the NSM API. By default, this value is 8443. You can configure it to any port number from 1025 to 65535.

- **Remote Replication of Database**—Mirrors the daily backup to an external server. You can toggle it on or off. After you turn it on, use the menu options to configure this option.

- **SRS Enabled Options (regional server only)**—Opens a menu to enable and configure Statistical Report Server (SRS). These options enable NSM3000 to interface with SRS. You can toggle it on or off. When it is on, a menu with additional options is available.

---

**NOTE:** SRS must be installed on a separate server from NSM.

---

The following sections provide details about the remote replication and SRS options:

- Enabling and Configuring Remote Replication of the Database on page 15
- Enabling and Configuring the Statistical Report Server (SRS) (Regional Server Only) on page 16

**Enabling and Configuring Remote Replication of the Database**

To configure remote replication of database settings:
1. On the Advanced Options menu, click Menu next to Remote Replication of Database (see Figure 5 on page 12) to configure daily backups (see Figure 12 on page 16).

**Figure 12: Remote Replication of Database Options**

<table>
<thead>
<tr>
<th>Menu: Remote Replication of Database</th>
</tr>
</thead>
<tbody>
<tr>
<td>Remote Replication of Database</td>
</tr>
<tr>
<td>Hour of day to Replicate Database</td>
</tr>
<tr>
<td>Remote Backup IP</td>
</tr>
<tr>
<td>Remote Replication Timeout (seconds)</td>
</tr>
</tbody>
</table>

2. Use the Remote Replication of Database option to turn remote replication on (y) or off (n). The default is off.

3. Use the Hour of day to Replicate Database option to start the backup. The valid range (in hours) is 00 through 23. The default is 2 AM.

4. Use the Remote Backup IP option to enter the IP address of the remote backup server.

   Backup information is copied to the /var/netscreen/dbbackup directory on the remote server. The “nsm” user must exist on both servers and you must establish an SSH trust relationship. See the Network and Security Manager Installation Guide, for details.

5. Use the Remote Replication Timeout option to set up a timeout for Rsync. The valid range (in seconds) is 1 through 65535. The default is 1800 seconds.

6. Click Submit to save the options and return to the main menu or continue with the other advanced installation options.

**Enabling and Configuring the Statistical Report Server (SRS) (Regional Server Only)**

(This option is not available on a central manager.) To configure statistical report server (SRS) settings:
1. On the Advanced Options menu, click **Menu** next to SRS (see Figure 5 on page 12) to open the SRS menu (see Figure 13 on page 17).

   **Figure 13: SRS Menu**

   ![SRS Menu](image)

   2. Use the SRS options to turn SRS on (**y**) or off (**n**). The default is off. If you turn on this feature, the server is used with the GUI server.

   3. Use the SRS DB IP option to enter the IP address for the server on which you have installed the SRS database server.

   4. Use the SRS DB Type option to select the database type. The values are `pgsql` (the default), `oracle`, or `mssql`.

   5. Use the SRS Database Name option to enter the name of the SRS database. The default value is `netscreen`. To enter another name, click the radio button next to the blank text box and enter the name in the text box.

   6. Use the SRS DB Owner Name option to enter the owner’s name of the SRS database. The default value is `netscreen`. To enter another name, click the radio button next to the blank text box and enter the name in the text box.

   7. Use the SRS DB Owner Password option to enter the SRS database password. The password requires a minimum of eight characters and is case-sensitive. Reenter the password in the second text box.

   8. Click **Submit** to save the options and return to the NSM Configuration Main Menu.

### Installing NSM Software

After you submit all your configuration options, click **Install** to install the NSM software on your NSM3000 appliance. Installation takes a few minutes. A status indicator
shows the progress of the installation. Wait until installation is finished before continuing to use the Web interface.

**Managing NSM Administration**

Expand *NSM Administration* in the left navigation tree to access the options described in this section. These options are available only after installing NSM.

The following sections explain how to use each of the NSM Administration options:

- Changing the Superuser Password on page 18
- Downloading NSM MIBS (Regional Server Only) on page 18
- Exporting Audit Logs on page 19
- Exporting Device Logs (Regional Server Only) on page 19
- Generating Reports (Regional Server Only) on page 20
- Modifying NSM Configuration Files on page 20
- Backing Up the NSM Database on page 21
- Changing the NSM Management IP on page 22
- Scheduling Security Updates on page 22

**Changing the Superuser Password**

To change the superuser password, select *NSM Administration > NSM Super User Password*. See Figure 14 on page 18.

**Figure 14: Change Superuser Password**

![Change Password for Super User](image)

**Downloading NSM MIBS (Regional Server Only)**

To download any available MIBs, select *NSM Administration > Download NSM MIBs*, and then click *Download MIB*. See Figure 15 on page 19. This option is not available on the central manager.
Exporting Audit Logs

To export audit logs, select NSM Administration > Export Audit Logs. See Figure 16 on page 19.

Exporting Device Logs (Regional Server Only)

To export device logs, select NSM Administration > Export Device Logs. See Figure 17 on page 19. This option is not available on the central manager.
**Generating Reports (Regional Server Only)**

To generate reports, select **NSM Administration > Generate Reports**. See Figure 18 on page 20. This option is not available on the central manager.

![Figure 18: Generate Reports](image)

**NOTE:** The user is an NSM administrator and not an NSM3000 user. Enter a user name as `domain/user`, such as `global/super`.

**Modifying NSM Configuration Files**

To manually edit the `GuiSrv.cfg`, `DevSrv.dfg` and `HaSvr.cfg` files, select **NSM Administration > Modify NSM Configuration Files**. The example in Figure 19 on page 21 shows the option to modify the `GuiSrv.cfg` file.
Figure 19: NSM Configuration Files

NSM Configuration Files

```
# this file contains just enough info for the processes
# to start up. Each process should pull its complete
# configuration from the XML DB

setuid.user         NSM
clientId            0
peerGuiSvrId        3
clientOneTimePassword  d85063a

default.printLevel  warn
default.printProperties where=file,sync=0,maxfilenum=15
#statusMonitor.printLevel   debug
#statusMonitor.printProperties where=file,sync=1,maxfilenum=150
#guiSvrDirectiveHandler.printLevel debug
#guiSvrLicenseManager.printLevel debug
#guiSvrManager.printLevel    debug

Save
```

**NOTE:** If you subsequently change the NSM3000 configuration by using the nsm-setup utility, all manual changes to the configuration files are lost.

---

**Backing Up the NSM Database**

To configure backups of the NSM database, select NSM Administration > NSM Database Backup link under NSM Administration. See Figure 20 on page 22.
Changing the NSM Management IP

To change the IP address of the NSM management server, select NSM Administration > NSM Management IP link under NSM Administration. See Figure 21 on page 22.

Scheduling Security Updates

To schedule security updates, select NSM Administration > Schedule Security Updates. See Figure 22 on page 23.
Managing System Administration

Use the options on the System Administration menu to perform the tasks described in the following sections:

- Rebooting or Shutting Down NSM3000 on page 23
- Changing the User Password on page 24
- Configuring the Network on page 24
- Managing RADIUS Servers on page 27
- Monitoring with SNMP on page 30
- Forwarding Syslog Messages on page 33
- Changing the System Time on page 37
- Installing Updates on page 37
- Managing Users on page 38
- Configuring the Web Interface on page 42

Rebooting or Shutting Down NSM3000

To reboot or shut down NSM3000, select System Administration > Bootup and Shutdown, and then click either Reboot System or Shutdown System. See Figure 23 on page 23.
Changing the User Password

To change the user password, select System Administration > Change User Password, fill out the form shown in Figure 24 on page 24, and then click Change.

Figure 24: Change User Password

Configuring the Network

To access options that allow you to configure the network, select System Administration > Network Configuration. The Network Configuration window appears as shown in Figure 25 on page 24.

Figure 25: Network Interfaces Options

The following sections describe each of the options available in the Network Configuration window:

- Network Interfaces on page 25
- Routing and Gateways on page 25
- Hostname and DNS Clients on page 26
- Host Addresses on page 26
Network Interfaces

Use this option to manage the network interfaces. See Figure 26 on page 25.

Managing RADIUS Servers

The NSM3000 WebUI supports authentication of users defined in the RADIUS servers, in addition to authentication of locally defined admin users.

When a user logs into NSM3000 using the WebUI, the software first checks the UNIX user database and then the WebUI user database to authenticate the user. If the user is not a locally defined admin user, the software contacts the RADIUS servers added to the RADIUS server list in the Web UI to authenticate the user. The RADIUS servers are contacted in the order of priority set in the RADIUS server list. If any of the RADIUS servers authenticates the user, the user is logged in with the privileges that are associated with the user profile. If none of the servers authenticates the user, the user login fails.

**NOTE:** The NSM3000 appliance must be configured as a RADIUS client on a RADIUS server so that the RADIUS server responds to authentication requests from NSM3000. Select any Juniper Make or Model in the Make/Model field while adding an NSM3000 appliance as a RADIUS client. You will need to update the juniper dictionary file (juniper.dct) in the RADIUS server with the Juniper defined Vendor-Specific Attribute (VSA) for NSM3000: `ATTRIBUTE Juniper-Nsmxpress-Profile Juniper-VSA(6, string)`. You will also need to add NSM3000 users with their associated user profiles (SysAdmin, NSMAdmin, Operator, Guest), to the RADIUS database. For more details see *Steel-Belted Radius Documentation*.

**NOTE:** You need System Administration or NSM Administration permission to manage RADIUS servers in the NSM3000 WebUI.

The following sections explain how to manage a RADIUS server:

- Adding a RADIUS Server on page 28
- Changing the Priority of RADIUS Servers on page 29
- Deleting a RADIUS Server on page 29
- Editing RADIUS Server Parameters on page 29
**Adding a RADIUS Server**

To add a RADIUS server:

1. Select **System Administration > Radius Management**. The RADIUS Servers dialog box appears listing the RADIUS Servers that have been added. See Figure 30 on page 28.

**Figure 30: RADIUS Servers Dialog Box**

2. Click **Add** to add a RADIUS Server to the WebUI. The Add Radius Server dialog box appears. See Figure 31 on page 28.

**Figure 31: Add RADIUS Server Dialog Box**

3. Configure the following parameters in the Add RADIUS Server dialog box:
   a. **Name**: The name of the user to be authenticated by the RADIUS server.
   b. **Server address**: The IP address or the hostname of the RADIUS Server.
   c. **Shared secret**: The shared secret NSM3000 and the RADIUS server use for secure authentication.
   d. **Auth Port**: The RADIUS authentication software port. (We recommend UDP port 1812)
   e. **Acct Port**: The RADIUS accounting software port. (We recommend UDP port 1813)
f. **Disconnect/CoA port**: The change of authorization or disconnect port.

g. **Timeout (sec)**: Automatic time out in second(s) of the RADIUS access-request after which the request will be retransmitted, if applicable. Enter a value between 1 and 10 seconds.

h. **Retries**: The number of times the RADIUS access-request must be retransmitted for RADIUS authentication. Enter a value between 1 and 5.

4. Click **Add**. The RADIUS Servers dialog box appears with the RADIUS Server you added listed.

### Changing the Priority of RADIUS Servers

To change the priority of RADIUS servers:

1. Select **System Administration > Radius Management**. The RADIUS Servers dialog box appears listing the RADIUS Servers that have been added.

2. To increase the priority of a RADIUS server, select the check box next to the name of the server whose priority you want to increase, and click **Move Up**.

   To decrease the priority of a RADIUS server, select the check box next to the name of the server whose priority you want to decrease, and click **Move Down**.

### Deleting a RADIUS Server

To delete a RADIUS server:

1. Select **System Administration > Radius Management**. The RADIUS Servers dialog box appears listing the RADIUS Servers that have been added.

2. Select the check box next to the name of the server you want to delete, and click **Delete Selected**.

---

**NOTE:** You need System Administration permissions to delete RADIUS servers.

---

### Editing RADIUS Server Parameters

To edit the parameters of a RADIUS server:

1. Select **System Administration > Radius Management**. The RADIUS Servers dialog box appears listing the RADIUS Servers that have been added.

2. Select the name of the server whose properties you want to edit. The Edit RADIUS Server dialog box appears. See Figure 32 on page 30.
3. Edit the parameters you want to change and click **Save**.

**Monitoring with SNMP**

You can configure your NSM3000 appliance for SNMP monitoring from a network operations server. The server can then issue periodic SNMP Get instructions to return the status of the NSM3000 appliance.

You configure SNMP on NSM appliances with access credentials for either SNMP v2c or SNMP v3. NSM3000 supports read-only access to the System Descriptor (sysDescr) and Host Resource MIB.

This section provides instructions for configuring NSM3000 for SNMP monitoring. You must provide access credentials for the SNMP server, a list of IP addresses from which logon requests will be accepted, and the trap conditions to be reported to the SNMP server.

To configure SNMP monitoring of your NSM3000 appliance, select **System Administration > SNMP Monitoring**. The SNMP window appears. This window contains the tabs described in the following sections:

- **SNMP Configuration on page 30**
- **SNMP System Information on page 31**
- **SNMP Trap Configuration on page 32**

**SNMP Configuration**

To configure SNMP:

1. Select **System Administration > SNMP Monitoring**.
2. Select the **SNMP Config** tab, which is shown in Figure 33 on page 31.
Figure 33: Configuring SNMP

3. Select the version of SNMP to be used, either **v2c** or **v3**.

4. Provide authentication information:
   - If you selected SNMP v2c, enter a username.
   - If you selected SNMP v3, enter a username and password.
     The password must be at least 8 characters long.
     NSM3000 implements a single username and password, which is effective only for SNMP communication and is not related to any other username and password used on the NSM appliance.

5. To limit SNMP Get requests to specific servers, select **Only**, and then enter the IP addresses of the permitted servers.

6. Click **Save**.

SNMP System Information

To configure SNMP system information:

1. Select **System Administration > SNMP Monitoring**

2. Select the **System Info** tab, which is shown in Figure 34 on page 31.

Figure 34: Configuring SNMP System Information

3. Enter the following information, with is required for any SNMP-managed device:
   - Contact—Contact information for the appliance.
4. Click **Save**.

### SNMP Trap Configuration

To configure SNMP trap conditions:

1. Select **System Administration > SNMP Monitoring**.
2. Select the **SNMP Traps** tab, which is shown in Figure 35 on page 32.

#### Figure 35: Configuring SNMP Traps

<table>
<thead>
<tr>
<th>Trigger</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Disk space low</td>
<td>15</td>
</tr>
<tr>
<td>Memory low</td>
<td>20</td>
</tr>
<tr>
<td>CPU high</td>
<td>85</td>
</tr>
<tr>
<td>NSM start/stop</td>
<td></td>
</tr>
<tr>
<td>Admin Logon/Logoff</td>
<td></td>
</tr>
<tr>
<td>External IP unreachable</td>
<td></td>
</tr>
</tbody>
</table>

3. In the Manager IP field, enter the IP address of the SNMP management server.
4. Select from the following trap conditions:
   - **Disk space low**
     Enter the percentage of free disk space below which SNMP issues a trap.
   - **Memory low**
     Enter the percentage of free memory below which SNMP issues a trap.
   - **CPU high**
     Enter the percentage of CPU use over which SNMP issues a trap.
   - **NSM start/stop**
   - **Admin Logon/Logoff**
   - **External IP unreachable**
     Enter the IP address of the required device.
5. Click **Save**.
Forwarding Syslog Messages

NSM3000 provides a simple mechanism for configuring syslog messaging between the appliance and a syslog receiver running rsyslog, syslog-NG, or basic syslog. This mechanism simplifies choosing syslog receivers, data sources of the messages you want to log, and the message transport used.

For the type of message transport, you can choose among TCP, SSL, and UDP. For rsyslog or syslog-NG implementations use TCP or SSL. SSL adds security to TCP; if you select SSL, NSM3000 creates a secure tunnel to the syslog receiver. UDP messaging is available for basic syslog implementations.

The following sections provide procedures for managing syslog message forwarding:

- Viewing Syslog Receivers on page 33
- Adding and Configuring Syslog Receivers on page 35
- Editing Syslog Receiver Configurations on page 37
- Deleting Syslog Receivers on page 37

Viewing Syslog Receivers

To view the syslog receivers configured on your NSM3000 appliance, follow these steps:
1. Select **System Administration > Syslog Forwarding**. The Syslog Forwarding window appears. Figure 36 on page 36 shows an example.

**Syslog Forwarding**

<table>
<thead>
<tr>
<th>Receiver/Address</th>
<th>Type</th>
<th>Device Server</th>
<th>GUI Server</th>
<th>HA Server</th>
</tr>
</thead>
<tbody>
<tr>
<td>server1</td>
<td>123.4</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>server2</td>
<td>123.5</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

2. View the configured syslog receivers in the table in the top portion of the window. Table 3 on page 34 describes the fields.

**Table 3: Viewing Syslog Receivers**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Receiver</td>
<td>A name provided by the network administrator to identify the syslog receiver</td>
</tr>
<tr>
<td>IP Address</td>
<td>The IP address of the syslog receiver</td>
</tr>
<tr>
<td>Type</td>
<td>The protocol used for forwarding messages: UDP, TCP, SSL</td>
</tr>
<tr>
<td>Data sources</td>
<td>The data sources configured for forwarding</td>
</tr>
<tr>
<td>System</td>
<td>The system logs configured to be sent to this receiver.</td>
</tr>
<tr>
<td>Device Server</td>
<td>The Device Server logs configured to be sent to this receiver.</td>
</tr>
<tr>
<td>GUI Server</td>
<td>The GUI Server logs configured to be sent to this receiver.</td>
</tr>
<tr>
<td>HA Server</td>
<td>The HA Server logs configured to be sent to this receiver.</td>
</tr>
</tbody>
</table>
Adding and Configuring Syslog Receivers

To add and configure a syslog receiver, follow these steps:

1. Select **System Administration > Syslog Forwarding**.
2. In the Data Sources section, select the syslog facility for each GUI Server log, Device Server log, and HA Server log. The syslog facility is a field included in the syslog message to help identify the data source.
3. Click **Save**.
4. Click **Add new Receiver**.

The syslog receiver configuration window appears as shown in Figure 36 on page 36.
5. In the Name field, enter a name for the syslog receiver. This is the name that the syslog receiver will be known by within NSM.

6. In the IP field, Enter the IP address of the syslog receiver.

7. In the Transport field, select the type of syslog receiver:
   - Select **UDP** for basic syslog implementations.
   - Select **TCP** for rsyslog or syslog-NG implementations.
Select SSL to create a secure tunnel to a syslog receiver in rsyslog or syslog-NG implementations.

In the System Logs section of the Data Sources table, select the sources of data from which system messages will be forwarded to the syslog receiver. These sources can include NSM system messages, package updates, and mail logs.

In the NSM section of the Data sources table, select each GUI Server log, Device Server log, and HA Server log to be forwarded to the syslog receiver.

8. Click Save to save and apply the configuration.

**Editing Syslog Receiver Configurations**

To edit a syslog receiver configuration, follow these steps:

1. Select System Administration > Syslog Forwarding.
2. In the Syslog Receivers window, click the name of the syslog receiver you want to edit.
   
   The syslog receiver configuration window appears for the selected receiver.
3. Make the desired changes to the configuration.
4. Click Save to save and apply your edits to the configuration of this syslog receiver.

**Deleting Syslog Receivers**

To delete a syslog receiver configuration, follow these steps:

1. Select System Administration > Syslog Forwarding.
2. In the Syslog Receivers window, check the box next to each syslog receiver you want to delete.
3. Click Delete selected receivers.
   
   NSM3000 deletes the selected syslog receivers and any secure tunnels configured for their use.

**Changing the System Time**

To set the system time, select System Administration > System Time. From the System Time window, you can perform the following functions:

- Set or change the system time.
- Set the time zone.
- Configure an NTP server to synchronize the system time with an external clock.

**Installing Updates**

Select System Administration > System Update to perform the following tasks:
Check for updates and install them.
Enable or disable automatic updates.
Install a new NSM3000 version.
Add or modify proxy settings for the Yum server.

Managing Users

The NSM3000 WebUI allows you to create multiple users with role-based access control to the WebUI. You can create a user in the WebUI and associate the user to a predefined user profile. You can also map a user created in the NSM3000 OS to a predefined user profile in the WebUI. However, this user profile is only applicable to the local OS user in the WebUI.

**NOTE:** You need System Administration permission to create users.

This topic contains the following sections:
- Creating New NSM3000 Users on page 38
- Deleting a User on page 40
- Editing User Attributes on page 40
- Understanding User Profiles on page 40

Creating New NSM3000 Users

To create a local OS user:

1. Select System Administration > User Management. The NSMXpress Users dialog box appears listing all NSM3000 users. See Figure 37 on page 38.

![Figure 37: NSMXpress Users Dialog Box](image)

2. Click Create a new NSMXpress User. The Create NSMXpress user dialog box appears. See Figure 38 on page 39.
To create a WebUI user:

1. Select System Administration > User Management. The NSMXpress Users dialog box appears listing all NSM appliance users. See Figure 39 on page 39.

   **Figure 39: NSMXpress Users Dialog Box**

   ![](image)

   2. Click Create a new NSMXpress User. The Create NSMXpress user dialog box appears.

3. Enter a user name in the Username text box.

4. Select **Set to** from the password drop-down list and enter the password you want to set in the password text box.

5. Reenter the password in the Confirm Password text box.
6. Select the user profile you want to associate with this user from the User Profile drop-down list box.

7. Click Submit. The NSMXpress Users dialog box appears with the new NSM appliance users listed.

**Deleting a User**

To delete a user:

2. Select the check box next to the name of the user you want to delete and click Delete Selected. Click Delete User in the Delete Users confirmation dialog box that appears.

NOTE: You cannot delete admin users or change their user profiles.

**Editing User Attributes**

To edit user attributes:

1. Select System Administration > User Management. The NSMXpress Users dialog box appears, with all NSM appliance users listed.

2. Click on the name of the user whose attributes you want to edit. The Edit NSMXpress Users dialog box appears.

3. Edit the parameters you want to change and click Submit. You can change the password and the user profile.

**Understanding User Profiles**

NSM3000 provides four predefined user profiles that allow you to implement role-based access control over the NSM appliance WebUI. A user created via the WebUI or in the RADIUS server can be associated with any one of the following profiles:

- System Administrator—System Administrators are superusers with full access to all modules in the NSM3000 WebUI.
- NSM Administrator—NSM Administrators have access to NSM Administration, RADIUS Management, Maintenance and Troubleshooting modules.
- Network Operator—Network Operators have access to Network Utilities and Report Generation Modules.
- Guest User—Guest Users have read access to System Information and System Statistics modules.
When a user logs in, NSM3000 modules are displayed or hidden based on the user profile and the permissions associated with the profile. For more details about user profiles and permissions, see Table 4 on page 41.

**Configuring the Web Interface**

To specify which NSM client computers can access NSM3000 through the Web interface, select System Administration > WebUI Configuration. The Allowed IP Addresses window appears as shown in Figure 40 on page 42.

**Figure 40: Web Interface Access**

**Maintaining NSM3000**

The Maintaining section of the NSM3000 navigation tree allows you to perform the tasks described in the following sections:

- Viewing System Statistics on page 42
- Upgrading the Recovery Partition on page 44

**Viewing System Statistics**

To view system statistics, select System Administration > Maintenance > System Statistics. The system Statistics window appears as shown in Figure 41 on page 43.
**Figure 41: System Statistics**

*System Statistics*

<table>

**CPU**

Select **CPU** to view graphs that monitor the CPU activity hourly, daily, weekly, monthly, or on a customizable basis.

**Log Rate**

Select **Lograte** to view graphs that monitor the log rate hourly, daily, weekly, monthly, or on a customizable basis.

**CPU Load**

Select **Load** to view graphs that monitor the CPU load hourly, daily, weekly, monthly, or on a customizable basis.

**Memory Data**

Select **Memory** to view graphs that monitor the memory activity hourly, daily, weekly, and monthly.

**Network Data**

Select either **eth0** or **eth1** to view graphs that monitor network activity hourly, daily, weekly, and monthly.

**Process Count**

Select **Process** to view graphs that monitor the number of processes hourly, daily, weekly, and monthly.

**Disk Data**

Select **Disk** to view graphs that monitor the file system disk space usage hourly, daily, weekly, and monthly.
**Tile All Graphs**

Select **Tile all graphs** to display all the statistical graphs for the system in one window.

**Upgrading the Recovery Partition**

The recovery partition contains all files necessary to perform a clean installation of the NSM3000 OS and its applications with default settings. It provides a last-resort recovery mechanism. When the NSM3000 appliance is shipped from the factory, the recovery partition files match the version of the NSM3000 OS with factory default settings.

Using the Recovery Upgrade option, you can make the current version of NSM3000 available for recovery, replacing the existing files in the recovery partition. The factory default recovery files are retained as an alternative recovery choice. Other versions are deleted.

Recovery upgrade uses two sets of packages to create a set of files from which you can perform a clean installation. One set makes up the NSM3000 OS, the other a set of upgrade script packages. Both sets are usually retained in the local file system. The NSM3000 OS set can also be downloaded from the Juniper Networks software repository.

NSM3000 splits the recovery upgrade process into a preparation phase and an upgrade phase. In the preparation phase, NSM3000 assembles a copy of the current version of the image files in a temporary workspace. In the upgrade phase, NSM3000 replaces the old recovery image files, and installs the current version of the image files from the temporary workspace into the recovery partition. By splitting the process into two phases, NSM3000 minimizes the period of vulnerability while the upgrade itself takes place.

To upgrade the recovery partition, follow these steps:

1. Select **System Administration > Maintenance > Update Recovery Partition**. If the new recovery partition files have already been prepared, then the Upgrade screen appears. Proceed with the upgrade phase as described in step 5.
   
   If the upgrade files have not yet been prepared, the Upgrade Preparation window appears. Proceed with the preparation phase in step 2.

2. Enter the location of the NSM3000 Regional server or Central Manager upgrade zip file, downloaded from the Juniper Customer Support Center when upgrading NSM, on the local file system.

3. If the NSM3000 Offline server upgrade file is available on the local file system, enter the location and name of the NSM3000 offline server upgrade file in the System upgrade source field. If the NSM3000 offline server upgrade file is not available on the local file system and the appliance has access to the Juniper Update site, select **Online**.

4. Click **Prepare System**.
   
   The Preparation Progress screen shows the progress of the operation.
Errors are reported if the required files are unavailable, disk space is not sufficient, or the previous version files are invalid.

When preparation is completed, the Upgrade window appears.

5. In the Upgrade window, enter the admin Web UI password and then click **Start Update**.

The upgrade process usually takes less than one minute.

---

**CAUTION:** Do not interrupt the upgrade process. If you do, your NSM3000 appliance might not boot normally.

---

**Troubleshooting**

Use the options in the Troubleshooting section to access the following information and utilities:

- Auditing User Operations on page 45
- Error Logs on page 47
- Network Utilities on page 48
- Tech Support on page 51

**Auditing User Operations**

You can audit all user operations performed in NSM3000. Users with System Administrator and NSM administrator permissions can view all Actions Logs in NSM3000.

To view Action Audit Logs:

1. Select **Troubleshooting > Action Audit Logs**. The NSMXpress Actions Log dialog box appears. See Figure 42 on page 46.
2. Select the Action Audit Logs that you want to view:

- **Actions by NSMXpress Users**: Select the **By any user** check box to select actions by all users. Select the **By user** check box and choose a username from the drop-down list to specify actions by a particular user. Select **By any user except** and choose a username from the drop-down list to exclude actions by a specific user.

- **Actions by User Profile**: Select the **By any profile** check box to select actions by all user profiles. Select the **By profile** check box and choose a profile from the drop-down list to specify actions by a specific user profile. Select **By any profile except** and choose a profile from the drop-down list to exclude actions by a user profile.

- **Actions by authentication mechanism**: Select the **By any authentication** check box to select actions by all authentication mechanisms. Select the **By authentication** check box and choose an authentication mechanism from the drop-down list to specify actions by a specific authentication mechanism. Select **By any authentication except** and choose a profile from the drop-down list to exclude actions by an authentication mechanism.

- **Actions in module**: Select the **In any module** check box to select actions in all modules. Select the **In module** check box and choose a module from the drop-down list to specify actions in a particular module.

- **Actions on dates**: Select the **At any time** check box to select actions at any time. Select the **For today only** check box to select today’s actions. Select the **For yesterday only** check box to select yesterday’s actions. Select the **During the last week** check box to select last week’s actions. Select the **Between** check box and enter the start date and end date in the drop-down list to view actions within the specified time period.

3. Click **Search**. The Search Results dialog box appears with the result of your query. See Figure 43 on page 47.
Error Logs

To review error logs, select Troubleshooting > Error Logs. Figure 44 on page 47 shows an example.

Figure 44: Review Error Logs

System Logs

To view details of an individual error log, select the file you want to view and click View. Figure 45 on page 48 shows sample error log details.
Network Utilities

To access basic network utilities (ping, traceroute, and nslookup) for TCP/IP Networking, select Troubleshooting > Network Utilities. These tools also provide an IP subnet calculator. See Figure 46 on page 48.

Ping

Ping is a tool for checking network connectivity. NSM3000 prompts with questions so you can focus your search.

Figure 47 on page 48 shows an example.
**How Many Packets**

Enter the number of packets this ping command will send. The default is 5. The values range from 1-99.

**Packet Size**

Enter the packet size (in bytes) this ping command will send. The default is 56. The values range from 1 through 9999.

**How Many Sec Between Sending Each Packet**

Enter how much time (in seconds) ping should wait between sending each packet.

**Patterns to Send (Hex)**

The data sent by ping contains a hexadecimal pattern. If you leave this option blank, ping will fill it with random data. This option is useful if you do not have problems with connectivity itself but with data loss.

**Verbosity Output**

NSM3000 lists the ICMP packets (other than ECHO_Response) that have been received.

**Numeric Output Only**

Check this option if you do not want any attempts to be made to look up symbolic names for host addresses.

**Bypass Routing Tables**

If the host is not a directly attached network, an error is returned. This option can be used to ping a local host through an interface that has no route through it.

**Traceroute**

Traceroute is a tool to print the route a packet takes to a network host. See Figure 48 on page 50.
Figure 48: Traceroute Utility

Module Index
Help...

Traceroute

Hostname:

- Verbose Output?
- Numeric Output only?
- Bypass routing tables?
- Use ICMP instead of UDP?
- Toggle Checksums?
- Socket level debugging?

How many Hops? 30
Packet Length? 40
How many sec between sending each packet? 5
Initial time-to-live? 1
Interface:

Trace It!

NOTE: The only required field is Hostname. The value can be either a hostname or an IP address.

Lookup

Use the lookup tool to obtain the IP address from a hostname and the hostname from an IP address (see Figure 49 on page 50). The query type drop-down list contains several types of records found in the DNS database. Enter a name server or select the default. If you choose the default, nslookup uses the server on which NSM3000 is installed.

Module Index
Help...

Lookup

Hostname:

- Type:
  - Network address (A)

Nameserver: Default
Timeout? 10

Look Up!

IP Subnet Calculator

Use the IP subnet calculator to calculate the netmask for a TCP/IP-network. You can calculate a netmask by class and subnet bits or by the number of hosts (see Figure 50 on page 51). When you calculate a netmask by the number of hosts, NSM3000 returns the smallest network available.
**Tech Support**

To get contact information for Juniper Networks technical support, select **Troubleshooting > Tech Support** under Troubleshooting. To help analyze problems, select a detail type in the drop-down list box, and then click **Run Tech-Support Script**. NSM3000 creates a file you can download and send to Juniper Networks technical support. See Figure 51 on page 51.

**Viewing System Information**

Use the System Information menu item to display information about the server, including CPU load and memory use, as shown in Figure 52 on page 52.
List of Technical Publications

Table 5 on page 52 describes the documentation for NSMXpress and NSM.

Table 5: Network and Security Manager Publications

<table>
<thead>
<tr>
<th>Book</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network and Security Manager Installation Guide</td>
<td>Describes the steps to install the NSM management system on a single server or on separate servers. It also includes information on how to install and run the NSM user interface. This guide is intended for IT administrators responsible for the installation or upgrade of NSM.</td>
</tr>
<tr>
<td>Network and Security Manager Administration Guide</td>
<td>Describes how to use and configure key management features in the NSM. It provides conceptual information, suggested workflows, and examples. This guide is best used in conjunction with the NSM Online Help, which provides step-by-step instructions for performing management tasks in the NSM user interface (UI). This guide is intended for application administrators or those individuals responsible for owning the server and security infrastructure and configuring the product for multiuser systems. It is also intended for device configuration administrators, firewall and VPN administrators, and network security operation center administrators.</td>
</tr>
<tr>
<td>Network and Security Manager Configuring ScreenOS and IDP Devices Guide</td>
<td>Describes NSM features related to device configuration and management. It also explains how to configure basic and advanced NSM functionality, including deploying new device configurations, managing security policies and VPNs, and general device administration.</td>
</tr>
<tr>
<td>Network and Security Manager Online Help</td>
<td>Provides procedures for basic tasks in the NSM user interface. It also includes a brief overview of the NSM system and a description of the GUI elements.</td>
</tr>
</tbody>

</tr>
</thead>
<tbody>
<tr>
<td>Network and Security Manager API Guide</td>
<td>Provides complete syntax and a description of the Simple Object Access Protocol (SOAP) messaging interface to NSM.</td>
</tr>
<tr>
<td>Network and Security Manager Release Notes</td>
<td>Provides the latest information about features, changes, known problems, resolved problems, and system maximum values. If the information in the Release Notes differs from the information found in the documentation set, follow the Release Notes. Release Notes are included on the corresponding software CD and are available on the Juniper Networks Website.</td>
</tr>
<tr>
<td>NSMXpress and NSM3000 User Guide</td>
<td>Describes how to set up and manage NSM appliances as a central manager or regional server.</td>
</tr>
</tbody>
</table>

**Requesting Technical Support**

Technical product support is available through the Juniper Networks Technical Assistance Center (JTAC). If you are a customer with an active J-Care or JNASC support contract, or are covered under warranty, and need post-sales technical support, you can access our tools and resources online or open a case with JTAC.

- **Product warranties**—For product warranty information, visit [http://www.juniper.net/support/warranty/](http://www.juniper.net/support/warranty/).
- **JTAC hours of operation**—The JTAC centers have resources available 24 hours a day, 7 days a week, 365 days a year.

**Self-Help Online Tools and Resources**

For quick and easy problem resolution, Juniper Networks has designed an online self-service portal called the Customer Support Center (CSC) that provides you with the following features:

- **Find CSC offerings**: [http://www.juniper.net/customers/support/](http://www.juniper.net/customers/support/)
- **Search for known bugs**: [http://www2.juniper.net/kb/](http://www2.juniper.net/kb/)
- **Find product documentation**: [http://www.juniper.net/techpubs/](http://www.juniper.net/techpubs/)
- **Find solutions and answer questions using our Knowledge Base**: [http://kb.juniper.net/](http://kb.juniper.net/)
- **Download the latest versions of software and review release notes**: [http://www.juniper.net/customers/csc/software/](http://www.juniper.net/customers/csc/software/)
- **Search technical bulletins for relevant hardware and software notifications**: [https://www.juniper.net/alerts/](https://www.juniper.net/alerts/)
Join and participate in the Juniper Networks Community Forum: http://www.juniper.net/company/communities/

Open a case online in the CSC Case Management tool: http://www.juniper.net/cm/

To verify service entitlement by product serial number, use our Serial Number Entitlement (SNE) Tool located at https://tools.juniper.net/SerialNumberEntitlementSearch/.

Opening a Case with JTAC

You can open a case with JTAC on the Web or by telephone.

- Use the Case Management tool in the CSC at http://www.juniper.net/cm/.
- Call 1-888-314-JTAC (1-888-314-5822 toll-free in the USA, Canada, and Mexico).

For international or direct-dial options in countries without toll-free numbers, see http://www.juniper.net/support/requesting support.html
