# Junos Pulse Mobile Security Gateway

## List of known issues:

- (Dashboard) Search items under “Reports Tab” overshoots screen. (R-262)
- Restore Toek e-mails were removed by disconnecting console from mail server. (R-260)
- Notes field under ‘User Groups’ and ‘Device Groups’ not saved after editing. (R-258, 259)
- Registration changes break Symbian clients when issuing insecure requests. (R-251)
- User interface problems have been reported when using IE 6. Browser versions IE 7 or greater is recommended for use with Mobile Security Gateway. (R-246)
- Enterprises do not inherit roles and profiles from the root Enterprise. (R-244)
- (Dashboard) “Received Phone Calls” displays the “send” icon instead of the “receive”. (R-237)
- The phone number field under general settings and the MSISD (misspelled) field under handset settings contain identical data. (R-188)
