

IDP MIB

The Juniper Networks enterprise-specific IDP MIB, `jnxJsIpdMIB`, whose object ID is `{jnxJsIpdRoot 1}`, extends SNMP support to the following features on Juniper Networks SRX100, SRX210, SRX240, and SRX650 Services Gateways:

- Key monitoring and threshold-crossing traps
- Attack-related monitoring and traps
- IDP database update status and traps

For a downloadable version of this MIB, see

www.juniper.net/techpubs/software/junos/junos10.0/swconfig-net-mgmt/jnx-js-ldap.mib.txt .

For information about the enterprise-specific IDP MIB objects, see the following topics:

- `jnxJsIpdObjects`
- `jnxJsIpdAttackTable`
- IDP Signature Update and Attack Traps
