

MPLS LDP MIB

The Juniper Networks enterprise-specific MPLS LDP MIB, whose object identifier is {jnxMibs 36}, contains object definitions as described in RFC 3815, *Definitions of Managed Objects for the Multiprotocol Label Switching (MPLS), Label Distribution Protocol (LDP)*.

This MIB was supported in earlier releases of JUNOS Software as a proprietary LDP MIB (mib-ldpmib.txt). Because the branch used by the proprietary LDP MIB (mib-ldpmib.txt) conflicts with RFC 3812, the proprietary LDP MIB (mib-ldpmib.txt) has been deprecated and replaced by the enterprise-specific MPLS LDP MIB (mib-jnx-mpls-ldp.txt).

For a downloadable version of this MIB, see http://www.juniper.net/techpubs/en_US/junos10.2/information-products/topic-collections/config-guide-network-mgm/mib-jnx-mpls-ldp.txt.
