

Sample Task—Configuring Setup with Quick Configuration

Figure 1 shows the Set Up Quick Configuration page. This page allows you to manage and configure basic routing platform setup easily from one location. You name the routing platform, set the root password, assign network addresses and servers. Set the time, and determine your management access by selecting or typing these values.

Figure 1: Set Up Quick Configuration Page

Quick Configuration

Set Up

Identification	Time
* Host Name: carol	Time Zone: America/Los_Angeles
Domain Name: lab.example.net	NTP Servers: [Empty list with Add/Delete buttons]
* Root Password: [Masked]	Current System Time: 01/20/2009 06:18
* Verify Root Password: [Masked]	[Set time now via NTP] [Set time now manually]

Network	Management Access
DNS Name Servers: 10.209.194.131, 10.209.194.133, 172.17.28.101	The following access methods are considered insecure as any information sent over them will be sent without encryption and could possibly be intercepted during transmission.
Domain Search: spglab.juniper.net, apglab.juniper.net, lab.example.net	Allow Telnet Access: <input checked="" type="checkbox"/>
Default Gateway: 123.0.1.2	Allow JUNOScript over Clear-Text Access: <input type="checkbox"/>
Loopback Address: 192.168.8.1/32	The following access method is considered secure as any information sent over it will be encrypted before transmission.
fe-0/0/0.0 Address: 192.168.69.205/21	Allow SSH Access: <input checked="" type="checkbox"/>

In order to enable HTTPS or JUNOScript over SSL, you will need to visit the SSL configuration page to configure certificates and associations.

[Apply]

For more information about setting up your system, see *Configuring Basic Settings* and the *JUNOS Software Installation and Upgrade Guide*.
