

## Example: Using Global Replace in a JUNOS Configuration—Replacing an Interface Name

---

The following example shows how you can replace an interface name in a configuration:

```
[edit]
user@host# show
protocols {
  ospf {
    area 0.0.0.0 {
      interface so-0/0/0 {
        hello-interval 5;
      }
    }
  }
}
[edit]
user@host# replace so-0/0/0 with so-1/1/0
[edit]
user@host# show
protocols {
  ospf {
    area 0.0.0.0 {
      interface so-1/1/0 {
        hello-interval 5;
      }
    }
  }
}
```
