

## domain-id

---

**Syntax** domain-id *domain-id*;

**Hierarchy Level** [edit logical-systems *logical-system-name* routing-instances *routing-instance-name* protocols (ospf | ospf3)],  
[edit routing-instances *routing-instance-name* protocols (ospf | ospf3)]

**Release Information** Statement introduced before JUNOS Release 7.4.

**Description** Specify a domain ID for a route. The domain ID identifies the OSPFv2 domain from which the route originated.

**Default** If the router ID is not configured in the routing instance, the router ID is derived from an interface address belonging to the routing instance.

**Options** *domain-id*—IP address.

**Required Privilege Level** routing—To view this statement in the configuration.  
routing-control—To add this statement to the configuration.
