

host

Syntax host *hostname* {
 services *severity-level*;
 facility-override *facility-name*;
 log-prefix *prefix-value*;
}

Hierarchy Level [edit interfaces *interface-name* services-options syslog]

Release Information Statement introduced before JUNOS Release 7.4.

Description Specify the hostname for the system logging utility.

Options *hostname*—Name of the system logging utility host machine. This can be the local Routing Engine or an external server address.

The remaining statements are explained separately.

Usage Guidelines See Applying Filters and Services to Interfaces.

Required Privilege Level interface—To view this statement in the configuration.
interface-control—To add this statement to the configuration.
