

## option

---

**Syntax** option {  
    [ (*id-number option-type option-value*)  
    (*id-number array option-type option-value*) ];  
}

**Hierarchy Level** [edit access address-assignment pool *pool-name* family (inet | inet6) dhcp-attributes]

**Release Information** Statement introduced in JUNOS Release 9.0.

**Description** Specify user-defined options that are added to client packets.

**Options** array—An option can include an array of option types.

*id-number*—Any whole number. The ID number is used to index the option and must be unique across a DHCP server.

*option-type*—Any of the following types: byte, flag, integer, ip-address, short, string, unsigned-integer, or unsigned-short.

*option-value*—Value associated with an option. The option value must be compatible with the option type (for example, an On or Off value for a flag type).

**Required Privilege Level** admin—To view this statement in the configuration.  
admin-control—To add this statement to the configuration.
