

refresh-from (Op Scripts)

Syntax refresh-from *url*;

Hierarchy Level [edit system scripts op],
[edit system scripts op file *filename*]

Release Information Statement introduced in JUNOS Release 7.6.

Description For JUNOS Software op scripts, overwrite the local copy of all enabled op scripts or a single enabled script located in the `/var/db/scripts/op` directory with the copy located at a URL other than the URL specified in the `source` statement.

Options *url*—Source specified as a Hypertext Transfer Protocol (HTTP) URL, FTP URL, or secure copy (scp)-style remote file specification.

Required Privilege Level maintenance—To view this statement in the configuration.
maintenance-control—To add this statement to the configuration.
