

Fast Update Filter Match Conditions

Table 1: Fast Update Filter Match Conditions

Match Condition	Description
<i>destination-address prefix</i>	IP destination address field.
<i>destination-port number</i>	TCP or UDP destination port field. Can be a single number, a single range, or one of the standard port synonyms.
<i>dscp number</i>	The differentiated services code point. Can be a single number, a single range, or the standard synonyms. IPv4 only.
<i>match-terms string-of-conditions</i>	A series of match conditions. Enclose the string within a set of quotation marks and use semicolons to separate entries. For example, <i>match-terms "protocol tcp; destination-port http";</i> . Dynamic profile variables are not allowed in the string.
<i>protocol number</i>	IP protocol field. Can be a single number, as single range, or one of the standard protocol synonyms. IPv4 only.
<i>source-address prefix</i>	IP source address field.
<i>source-port number</i>	TCP or UDP source port field. Can be a single number, as single range, or one of the standard protocol synonyms.
