

jnxSyslogAvTable

The `jnxSyslogAvTable`, whose object identifier is `{jnxSyslogNotifyVars 2}`, provides information about each system log message generated by the router.

The `jnxSyslogAvEntry`, whose object identifier is `{jnxSyslogAvTable 1}`, has three objects, which are listed in Table 1. Each entry provides information about attribute value pairs of system log messages generated by a device.

Table 1: jnxSyslogAvTable

| Object | Object Identifier | Description |
|-----------------------------------|---------------------------------|--|
| <code>jnxSyslogAvIndex</code> | <code>jnxSyslogAvEntry 1</code> | Index for the attribute value pair in the system log message. |
| <code>jnxSyslogAvAttribute</code> | <code>jnxSyslogAvEntry 2</code> | Attribute of the system log message (identified by <code>jnxSyslogID</code>). |
| <code>jnxSyslogAvValue</code> | <code>jnxSyslogAvEntry 3</code> | Value of the attribute (identified by <code>jnxSyslogAvAttribute</code>). |
