

Establishing FA-LSP Path Information

When you configure explicit LSP paths for an FA-LSP, you must use the traffic engineering link remote address as your next-hop address. When CSPF is supported, you can use any path option you wish. However, when CSPF is disabled with the `no-cspf` statement at the `[edit protocols mpls label-switched-path lsp-name]` hierarchy level, you must use strict paths.

```
[edit]
protocols {
  mpls {
    path path-name {
      next-hop-address (strict | loose);
    }
  }
}
```

NOTE: If the end-to-end LSP originates on the same routing platform as the FA-LSP, you must disable CSPF and use strict paths.
