

ACTIVATE YOUR JUNIPER NETWORKS QFX SERIES PRODUCT FEATURES

This document briefly describes how to use your Juniper Networks Authorization Code to generate a license activation key for your Juniper Networks® QFX Series product. The figure also highlights the major steps in the process.

Four Easy Steps to Activate Your Juniper Networks Product Features

1. Gather your Authorization Code and device serial number.
Authorization Code: The 16-digit alphanumeric Authorization Code is sent in response to your order and is required to generate the license activation key for your QFX Series product. Note: The Authorization Code is required to generate your license activation key—it is not the license activation key itself.

Device Serial Number: The serial number is a unique alphanumeric code used to identify your Juniper Networks QFX Series product when generating license activation keys. You can find the serial number ID label on the sliding panel to the right of the fan tray. You can also find the serial number by executing the “show chassis hardware” command in the command-line interface (CLI) in operational mode.

2. Sign into the Juniper Networks License Management System at www.juniper.net/generate_license. Select the QFX Series link in the product list dropdown, and follow the instructions in the system user interface.

3. The License Management System will provide you with your license activation key in one of two ways:

- Downloading your license activation key to your computer from the Juniper Networks License Management System.
- Receiving an email from the License Management System containing your license activation key.

4. To add one or more new license activation keys on the QFX Series product with the CLI:

- Add the license activation key or keys:
 - To add one or more license activation keys from a file or URL, specify the filename of the file or the URL where the activation key is located:

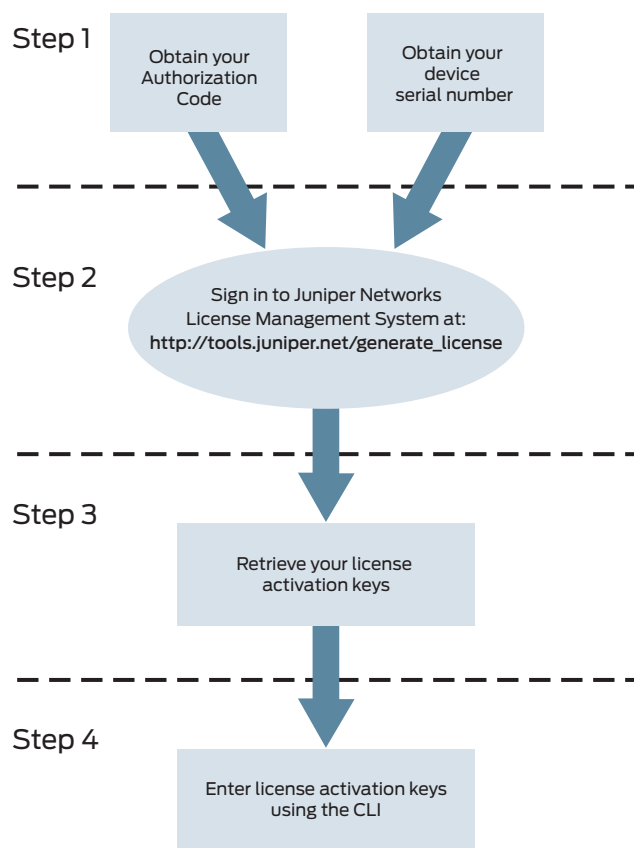

```
user@switch> request system license add filename
| url
```

- To add a license activation key from the terminal:

```
user@switch> request system license add
terminal
```

- When prompted, enter the license activation key, separating multiple license activation keys with a blank line. If the license activation key you enter is invalid, an error appears in the CLI output when you press Ctrl+d to exit the license entry mode.

Quickly and Easily Activate Your QFX Series Product

For more detailed information regarding license activation key types, generating a new license activation key, and upgrading existing license activation keys, please refer to the information located at the link www.juniper.net/techpubs. Go to the QFX Series link and navigate to the Junos OS Basics pathway page for additional information.

For additional assistance, you may contact Juniper Networks Customer Care at +1-888-314-5822 (United States) or +1-408-936-1572 (outside the United States). Alternatively, you may also open a case online using the Juniper Customer Support Center (CSC) Case Manager.
